Granular Activated Carbon (GAC) Filtration

UV irradiation

- Three reactors
- Cryptosporidium inactivation
- Disinfection

Purton TW

Ultraviolet irradiation

Inactivates crypto at 40mJ/cm²

UV-C rays

Cryptosporidium

Nemesis of the water industry!

6 – 8 μm (micron) in diameter = 0.006 to 0.008 mm

Resistant to chlorine

Chlorination

- On-site Electro-chlorination
- Sodium hypochlorite
- Disinfection
- Contact time (Ct)

Purton TW

Chlorination and Pumping

Compliance

Compliance with water quality standards

Also Known As:

Mean zonal compliance (MZC)

Actual: 99.97%

Target: 100%

Definition

Drinking water must meet strict standards that ensure it is safe to drink and the quality is acceptable to consumers. This is a water quality compliance measure based on a series of 35 parameters (e.g. levels of lead, nitrate levels etc.) determined by the Drinking Water Inspectorate. It is calculated based on sampling each parameter at supply points and customer taps in a number of specified zones.
